TIB-E-NIJAT

Camera-based vital signs screening for every neighborhood pharmacy

Ahmad Ali · Sachin Kumar · Muhammad Uzair

PROBLEM

Pakistan has fewer than **280,000 doctors** for **240 million people**.

A basic vitals check can mean hours of travel and waiting.

Many people skip checks until they are seriously ill.

SOLUTION

A 30-second screening with a tablet camera.

Look at the camera: pulse, HRV, and breathing.

A clear result: Normal, Monitor, or See a Doctor.

A screening tool that refers you to a doctor.

HOW IT WORKS

Heart Rate & HRV

Tiny skin color changes reveal each heartbeat.

Breathing & Stress

Chest movement and heart rhythm show breathing and stress.

Triage Result

A traffic-light result, with doctor referral when needed.

Confidence meter asks for a retake in poor light. Low-light mode: fingertip and flash. Target: within 2 BPM of ECG, to be confirmed in our trial.

Patients

Families who want a quick, low-cost health check.

Customers

Pharmacy owners who earn extra income and attract walk-ins.

Where we start

Tier 2 and 3 cities and towns, beginning in our own native villages, then scaling on real data.

TARGET MARKET

COMPETITIVE ANALYSIS

Alternative	Limitation	Tib-e-Nijat
ECG carts	Costly, needs trained staff	Just a tablet
BP machines, oximeters	One measure, no referral	Several vitals, with referral
Doctor apps (Oladoc, Marham)	No vitals before the call	Partners: we give doctors the vitals

Our edge: low cost, simple at the counter, connected to doctors.

CHALLENGES

Challenge	Our answer
Poor lighting	Fingertip-and-flash mode
Skin tones and devices	Diverse trial; weak scans trigger a retake
Weak internet	Runs on the device in under a second
Regulation and liability	Screening, not diagnosis; DRAP and ethics approval before the trial

PRIVACY

Face video is processed on the device and never stored.

Only the result is kept, and shared only with the patient’s consent.

FINANCE

About 50 PKR

Per scan, by cash or Zindigi QR.

Roughly 40%

Goes to the pharmacy, about 20 PKR per scan.

Roughly 60%

Stays with us for software, tablet, and support.

~30,000 PKR

Rough monthly revenue per store at about 20 scans a day.

Rough estimates, to be confirmed in our trial.

Now: Pharmacies

Tablet stations at chemist counters.

Next: Approach Doctors

Connect with doctor apps so doctors see vitals before the call.

Later: Digital Wallets

Micro-insurance with wallets like Zindigi, subject to SECP approval.

ROLLOUT STRATEGY

ROADMAP

MONTH	ACTIVITY	OUTCOME
M 1-3	Ethics approval and hospital trial against ECG	100-200 patients
M 4-6	Trial of the app with pharmacies in our native villages (no stations set up yet)	Real-world results reviewed
M 7-12	Set up a small number of stations in nearby towns, then grow; doctor and wallet partnerships	First stations live; 1-2 doctor apps

Month 3: accuracy holds up. Month 6: village trial results are positive.
Month 12: first stations and one doctor partner live.

OUR ASK

We are seeking 2,000,000 PKR to:

45%	30%	25%
900,000 PKR	600,000 PKR	500,000 PKR
Pilot stations: tablets, setup, and training	Clinical trial: ethics approval and ECG reference	Regulation and partnerships: DRAP, legal, doctors and wallets

In 12 months: a validated product, live pharmacies, and a first doctor partner.

TEAM AND PROGRESS

Ahmad Ali	Sachin Kumar	Muhammad Uzair
Business & Partnerships	**Technology & Demo**	**Research & Validation**

Working prototype: live camera scan demo.

Next: validate accuracy against ECG.

Tib-e-Nijat makes basic health screening instant, affordable, and available at the neighborhood pharmacy: no special hardware, no video stored.

CONCLUSION

Tib-e-Nijat (طبِ نجات)

THANK YOU
